Session 16

1. SELECT CONCAT(first_name, ' ', last_name) AS full_name

FROM users;

Explanation: The CONCAT() function combines first_name and last_name with a space between them. The AS full_name gives the result column the name full_name.

2. SELECT UPPER(song_title)

   FROM playlists;

Explanation: The UPPER() function converts all song titles in the song_title column to uppercase letters.

3. SELECT TRIM(item_code) AS item_code

FROM food_items;

Explanation: The TRIM() function removes leading and trailing spaces from the item_code values. The AS item_code keeps the output column name as item_code.

4. SELECT RIGHT(imdb_id, 7) AS movie_number

FROM movies;

Explanation: The RIGHT(imdb_id, 7) function extracts the last 7 characters from the imdb_id column. The AS movie_number renames the output column to movie_number.

5. SELECT REPLACE(sku_code, '-', '_') AS sku_code

FROM products;

Explanation: The REPLACE() function replaces all dashes (-) in sku_code with underscores (_) and displays the updated codes.
